

VersaDev, a leading developer of web-based applications, has extensive experience creating high quality Help Desk and CRM software, corporate intranets, e-government software applications, e-commerce enabled web sites and on-line applications.

Our services range from creation and implementation (Help Desk and CRM software, Intranet software, e-government software, feasibility studies, technical reviews, web design, e-commerce, extranets, database integration and web-enabling standalone applications) through to support services (web maintenance, site placement and network solutions).

Our staff are also available to offer maintenance, technical support, and further development of your current site.

VersaDev's customers range from small to large companies in manufacturing, computing services, agriculture, retail, health, local government agencies, councils, universities and professional firms of all kinds.

## :: Helpdesk/SRS Solutions ::

Whether you are supporting clients or internal users, *versaSRS* can reduce your company's workload while increasing end-user satisfaction.

Based on the Microsoft .NET Framework, *versaSRS* provides a flexible and scalable solution for managing service request processes and providing cost effective solutions to end users and customers.

Please see '*versaSRS*' product brochure for more information.

## :: Intranet / Extranet Solutions ::

An intranet/extranet is a powerful and sophisticated private network that allows your organisation to harness the power of your company information.

An Intranet / Extranet allows our client's staff to access company information and documents over a secure network. Employees can work remotely during or after office hours with the same interface and data available to them.

Please see '*versaNET*' product brochure for more information.

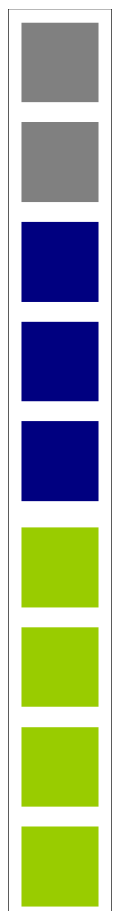

## :: E-commerce Solutions ::

VersaDev's e-commerce solutions allow our clients to sell their products and services securely over the Internet. Credit card details can be processed directly over the Internet or can be e-mailed / faxed securely to your business for manual processing.

Talk to us about our ecommerce and real-time payment gateway solutions.

We have extensive experience in building secure on-line e-commerce solutions based on the following realtime payment gateways:

- National Australia Bank
- National Secure Internet Payment Service (NSIPS)
- Commonwealth Bank - Internet Payment Service (CBIPS)
- ANZ eGate
- St George
- Bizgate
- Paypal

## :: Web & Software Solutions ::

Using the latest technologies, we have developed a broad range of on-line solutions ranging from simple web presences to high-end corporate ecommerce sites and on-line applications.

Our sites feature:

- high levels of user interactivity
- dynamic content delivery
- on-line authoring and administration tools
- web deployed applications
- secure on-line e-commerce solutions
- excellence in graphic design

## :: Custom e-Government & Business Solutions ::

VersaDev has extensive experience designing custom software applications for councils, local government and corporate businesses.

Our custom application development projects are invariably aimed at automating business processes and improving work flow.

Examples are:

**versaBPRM**—Business Planning & Risk Management Software

**versaPDP**—Personal Development Plan Software

**versaPPS**—Project Proposal and Budget Building Software

**SMILEY**—Staff Details/Location Software System

These applications can be tailored to your business needs, or talk to us about your custom requirements.

## :: Our Clients ::
